Definitions of terms used in this document

> Sales growth
Faurecia’s year-on-year sales evolution is made of three components:

- A “Currency effect”, calculated by applying average currency rates for the period to the sales of the prior year,
- A “Scope effect” (acquisition/divestment),
- And “Growth at constant currencies”.

- As scope effect, Faurecia presents all acquisitions/divestments, whose sales on an annual basis amount to more than €250 million.
- Other acquisitions below this threshold are considered as “bolt-on acquisitions” and are included in “Growth at constant currencies”.
